

During Candling

Capture which hatching eggs are candled, in real time

Hatchtrack automated barcoding technology minimises data entry while allowing you to record every event in the hatchery journey. Hatchtrack automatically gathers data that supports effective stock management, from egg ordering through to delivery of day-old chicks. Our system also allows you to boost productivity, reduce errors and cut costs. An integrated report designer offers a range of options for presenting information to management, customers, auditors and other users.

Candling

In the candling room, a wireless scanner is available to scan batches to be candled.

Batch information can automatically be sent to candling

machines (such as Prinzen or Innovatec) by scanning an Eggs Cargo Identifier (ECI) at the trolley unloader. When the next batch is scanned, candling results are fed back into Hatchtrack.

If a vaccination machine is available, vaccination details can also be added to the specific batch.

Hatchtrack can send all batch specific candling and vaccination results to your existing ERP systems.

Hatchtrack. Knows where your chick goes.

Hatching

After candling, the hatchable eggs are transferred to hatching baskets. The Eggs Cargo Identifier (ECI) can be moved from setter tray to the first basket of the batch. These hatching baskets are linked to specific dollies, which are connected to specific hatcher and hatcher positions or sections

Hatchtrack is a flexible, easy and secure method of tracking and tracing hatching eggs and day-old chicks at every hatchery stage. The technology, based on verification software, barcode tags and tag readers, makes it easy to exchange data with hatchery management and existing ERP systems. Would you like to know more about our integrated solutions and the benefits they can deliver for your operations? Want to discuss your own requirements or challenges, or find out how we can help you?

Benefits

- Real-time accurate inventory of hatchable eggs
- Candling results per setter and setter position
- No manual data entry errors
- Data synchronisation with existing ERP systems
